Art Unit: 1746

1. Applicant's election with traverse of the invention of GROUP I in the reply filed on Aug. 1, 2006 is acknowledged. The traversal is on the ground(s) that since the subject matter of the groups overlap, it would not be a serious burden on the examiner to exam the groups together. This is not found persuasive because the search for the nonelected group would require a search in class 8, subclasses 158 and 8/159 which would require to search an additional 1700+ documents.

The requirement is still deemed proper and is therefore made FINAL.

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1, 2, 4-7, 9 and 10 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by UK'251 (United Kingdom 2,052,251).

Re claim 1 for example, note the UK'251 each disclose s washing machine comprising: a tub; a sensor positioned and configured to sense a conductivity of a fluid in said tub; and a controller operatively coupled to said sensor for controlling an amount of the fluid in said tub based on the conductivity of the fluid (see abstract).

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 3, and 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over UK'251.

Claims 3 and 8 respectively define over UK'251 only in the recitation of the location of the sensor and the length of time. Nonetheless, to have the sensor located as claimed is deemed to be a mere rearrangement of parts. Also note that the period of 3 seconds claimed is of little patentable weight in apparatus claims and in view of the inherent period in UK'251.

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. In Shon, Japan'272, Japan183, Brady et al., Livingston et al., Takeda et al., and Niewyk et al., note the control and measuring means.

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to FRANKIE L. STINSON whose telephone number is (571) 272-1308. The examiner can normally be reached on M-F from 5:30 am to 2:00 pm and some Saturdays from approximately 5:30 am to 11:30 am.
